

betnacional ou bet365

I am trying to login to my account on bet365 using selenium python. I know that the site detects selenium and most people usually run into issues. but i didnt get any of the common issues. The sites loads well but when I try to

```
input my correct login details. It says Login details not recognized. This is my code: self.driver.get('://bet365') # Waits until page is fully loaded
```

```
WebDriverWait(self.driver, 20).until(lambda x: x.find_element_by_class_name('hm-MainHeaderRHSLoggedOutW'))
```

```
login_frame = self.wait(By.CLASS_NAME, 'hm-MainHeaderRHSLoggedOutW')
```

```
# Function that clicks the login button self.doAction(login)
```

```
waits until the login popup shows username = self.wait(By.CLASS_NAME, 'username')
```

```
username.send_keys('username') # my username password = self.driver.find_element_by_class_name('lms-StandardLogin_Password')
```

```
password.send_keys('password') # my password password.send_keys(Keys.RETURN)
```

is the issue from the site or is the site just saying that because i am using selenium. If i login normally it works fine. Please any swift help will be appreciated
