

bitstars free spin

KenKen is a grid-based game similar to Sudoku. The main difference is that KenKen cells contain arithmetic operations and the goal is to fill the grid with numbers 1-9 such that each row, column, and irregularly shaped block contains each number exactly once. For example, in a 4x4 grid you can only use numbers 1-4. Unlike Sudoku, KenKen blocks are irregularly shaped, as opposed to the 3x3 square blocks in a regular Sudoku.
