

# blackjack gr&#225;tis

&lt;p&gt;An ace-high straight flush, commonly known as a royal flush, is the bes  
t possible hand&lt;/p&gt;  
&lt;p&gt; in many variants of poker.&lt;/p&gt;  
&lt;p&gt;In &#128139; poker, players form sets of five playing cards, called&lt  
&lt;p&gt; hands, according to the &lt; rules of the game.[1] Each hand has &#128139;  
 a rank, which is compared&lt;/p&gt;  
&lt;p&gt; against the ranks of other hands participating in the showdown to deci  
de who wins the&lt;/p&gt;  
&lt;p&gt; &#128139; pot.[2] In high games, like Texas hold &#39;em and seven-ca  
rd stud, the highest-ranking&lt;/p&gt;  
&lt;p&gt; hands win. In low games, like razz, &#128139; the lowest-ranking hand  
s win. In high-low split&lt;/p&gt;  
&lt;p&gt; games, both the highest-ranking and lowest-ranking hands win, though d  
ifferent rules&lt;/p&gt;  
&lt;p&gt; are used &#128139; to rank the high and low hands.[3][4]&lt;/p&gt;  
&lt;p&gt;Each hand belongs to a category&lt;/p&gt;  
&lt;p&gt; determined by the patterns formed by its cards. &#128139; A hand in a  
 higher-ranking category&lt;/p&gt;  
&lt;p&gt; always ranks higher than a hand in a lower-ranking category. A hand is  
 ranked &#128139; within&lt;/p&gt;  
&lt;p&gt; its category using the ranks of its cards. Individual cards are ranked  
, from highest to&lt;/p&gt;  
&lt;p&gt; lowest: A, K, Q, &#128139; J, 10, 9, 8, 7, 6, 5, 4, 3 and 2.[5] Howev  
er, aces have the highest&lt;/p&gt;  
&lt;p&gt; rank under ace-to-five high &#128139; or six-to-ace low rules, or und  
er high rules as part of a&lt;/p&gt;  
&lt;p&gt; five-high straight or straight flush.[6][7] Suits are not &#128139; r  
anked, so hands that differ&lt;/p&gt;  
&lt;p&gt; by suit alone are of equal rank.[8]&lt;/p&gt;  
&lt;p&gt;There are nine categories of hand when using a&lt;/p&gt;  
&lt;p&gt; &#128139; standard 52-card deck, except under ace-to-five low rules w  
here straights, flushes and&lt;/p&gt;  
&lt;p&gt; straight flushes are not recognized. An additional category, &#128139;  
 five of a kind, exists&lt;/p&gt;  
&lt;p&gt; when using one or more wild cards. The fewer hands a category contains  
, the higher &#128139; its&lt;/p&gt;  
&lt;p&gt; rank.[9] There are  $52 \cdot (52 - 5) = 311,875,200$   $\{displaystyle \{ e$   
 $gin{matrix}\{ rac&lt;/p&gt;$   
&lt;p&gt;  $\{52!\}{(52-5)!}\}=311\{,875\{,200end{matrix}\}$  ways to deal &#128139;  
five cards from the deck but&lt;/p&gt;  
&lt;p&gt; only  $52 \cdot (52 - 5) \cdot 5 = 2,598,960$   $\{displaystyle \&#128139; \{ eg$   
 $in{matrix}\{ rac&lt;/p&gt;$   
&lt;p&gt;  $\{52!\}{(52-5)!5}\}=2\{,598\{,960end{matrix}\}$  distinct hands, because  
the order in&lt;/p&gt;  
&lt;p&gt; which cards are dealt or arranged in a hand does not matter.[10] &#128
