

jogo betmotion

Odds of 3-5 indicate that your profit will be three-fifths of a dollar.

In other words,

for every \$5 you bet you can win \$3 in profit. To determine profit

for a bet of \$5, you divide the odds by the odd + 1

to get the profit. For example, if the odds are 3 to 1, you divide 3 by 4 to get 0.75, which is 75% of the bet.

For negative odds, you divide the odds by the odd + 1

to get the profit. For example, if the odds are -1 to 1, you divide 1 by 2 to get 0.5, which is 50% of the bet.

For fractional odds, you divide the odds by the odd + 1

to get the profit. For example, if the odds are 2 to 1, you divide 2 by 3 to get 0.66, which is 66% of the bet.

For decimal odds, you divide the odds by the odd + 1

to get the profit. For example, if the odds are 3.0, you divide 3.0 by 4 to get 0.75, which is 75% of the bet.

For implied probability, you divide 100 by the odds + 1 to get the percentage of the bet that will be returned as profit.

For example, if the odds are 3 to 1, the implied probability is 25%.
