The 4-2 Rule is a way to turn the number of drawing outs you have into your odds of hitting them.

It's times 4 on the flop to hit on the turn or river, and times 2 on the turn or river.

Example: a flopped flush draw is 9 outs.

Multiply this by 4, and the odds are 36 to 1.

It's above micro-stakes poker, but below the stakes.
